EXPERIENCE

DevelopmentNow, Portland — Technical QA Analyst/Developer

June 2016 - PRESENT (Temporary - Contract)

Work in QA team to find and troubleshoot bugs by manually testing Android and iOS devices and report them in Jira.

Check Dropbox, Zeplin for layout and UI/UX design and compare files with the application in different size devices.

Perform full regression tests, smoke, negative, white box testing written in Test Rails.

Directly collaborate with UI designers and developers for app appearance and performance.

DevelopmentNow, Portland — Android Intern

June 2016 - July 2016

FitMap (Android)

Worked in a team to design and build an app that helps users track steps taken, calories consumed and burned throughout the day. Utilized Agile Software methodology for stories and steps to build the app. Used multiple API's to get google maps, walking paths, and meal tracker, SQLite Database to save and update calories and steps.

Gastro Mania, Portland — Co-Owner & Marketing Manager

(Family business, working in my free time)

Create menus by utilizing HTML and CSS for designs

Edit website via WordPress

Schedule/maintain restaurant's meetings and events

Meet with advertisers, providers, and marketing partners

PROJECTS

Hair Salon: <https://github.com/polina13/HairSalon.git>

This is Java application that illustrates the hair salon operation process by adding stylists and their clients to each stylist. Some of the technologies used are: Spark, Firebase, JUnit, FluentLenium, Velocity, Bootstrap, Database.

Q&A Board: <https://github.com/polina13/Q-A-MessageBlog.git>

This Ember.js application is designed to be a Message Board where the users can enter their questions and the public and/or another user will answer the question. It is built using Ember.js, customer helpers, computed property, service called favorite-question, Git, Node.js, Bower, and helpers.

SKILLS

Technical

HTML/CSS
